

PUBLIC DISCLOSURE PROTOCOL

Nordion is committed to open and transparent relationships with its stakeholders, including employees, suppliers, customers, regulators and the public. The purpose of the Program, as it relates to the CNSC licensed activities of our Ottawa facility, is to ensure that information related to the health, safety and security of persons and the environment, and other issues associated with the lifecycle of the facility are effectively communicated to the public. The Company has established a Public Disclosure Protocol (the "Protocol") to ensure that public communications are informative, timely, accurate, and that material information is disclosed in accordance with applicable legal and regulatory requirements to the general public. This Protocol is an integral part of Nordion's Program.

In order to determine what types of information would be of public interest, Nordion shall consult with public stakeholders and interest groups with a primary focus on the local community.

The objectives of the Protocol are to:

- Provide information on health, safety, and security of persons and the environment, and ensure issues associated with facilities' licensed operations and activities are communicated.
- Communicate, on an ongoing and timely basis. Communications will address the public's perception of risk, as well as the level of public interest of our facility operations, activities, and anticipated effects on environment and health and safety of persons.
- Ensure consistent standards and procedures for public disclosure of material and non-material information.

Ensure communications are balanced and broadly communicated in a non-selective manner to individuals, organizations, stakeholders and the public based on real or perceived risks and public interest or concern.
