

Nordion®

A Sotera Health company

Introducing GammaFIT™

The Latest in Flexible Irradiator Technology

The GammaFIT irradiator is a lower cost, upgradable alternative to standard irradiators, offering the same Nordion quality and support.

Low Initial Capital Cost

The GammaFIT irradiator provides a lower cost option to Nordion's other product offerings with the same high quality standards. New gamma users can start out with an affordable irradiator configuration and increase the investment as their business grows.

Variety of Configurations for Optimum Processing

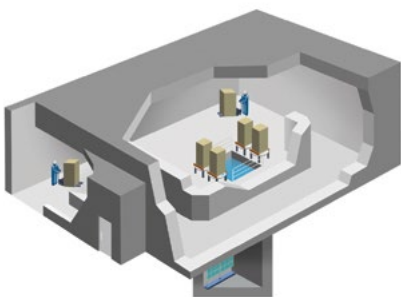

The GammaFIT irradiator is optimized for flexibility. Customers can choose to start at the irradiator configuration which best suits their business needs today, with the option to change and upgrade as business needs grow.

Easy Upgrades to Accommodate Product Mix and Volume

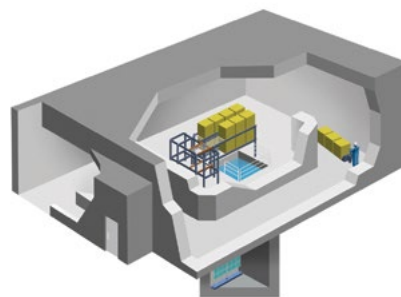

The GammaFIT irradiator was designed with upgrades in mind. Higher volumes or change in product mix warrant an upgrade to a configuration with higher capacity. The modular design minimizes irradiator downtime during an upgrade.

Nordion Quality, Reliability and Support

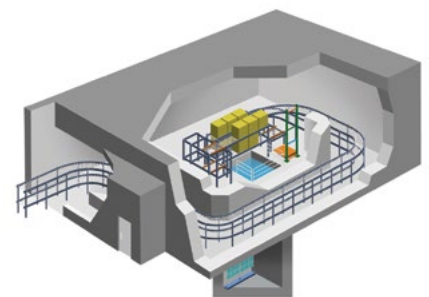

Nordion stands behind all of its products, including the new GammaFIT irradiator. Our high quality and safety standards and our product reliability set the industry standard.
