

Nordion (Canada) Inc. Event Reporting
For the Quarter (Apr to Jun 2022)

Event Number	Event	Status/Outcome
22-04*	Missed Leak testing of Non-Production Radioactive Material Inventory	Due to staffing transitions, Nordion did not perform leak testing of several non-production sources within the required timeframes. Subsequent testing confirmed the integrity of the sources.
22-05*	Mis-declared trailer	Nordion shipped an empty trailer to Bruce Power. Nordion's initial assessment indicated the trailer contained contamination below the exemption level and therefore the shipment was not classified as Class 7. However, upon further discussions, it was determined that the contamination did exceed the exemption levels and thus shipment was mis-declared. Nordion has updated the contamination monitoring program to ensure Class 7 designation is properly applied in all situations. There were no negative impacts to the public or the environment.
22-08*	Vehicle involved in an accident	A transport vehicle carrying Co-60 was involved in an accident in Ontario. A low-speed collision was caused by another vehicle. There was no damage to the conveyance, or the transport packages and the truck was able to continue the shipment safely. There was no risk to the public and the environment.

** There was no impact to health, safety, environment or security as a result of these events*
