

**Nordion (Canada) Inc. Event Reporting**  
For the Quarter (July to September 2024)

Velocity Incident Number	Event	Status/Outcome
IN-20240829-004*	Package damaged while in possession of the air carrier	Nordion delivered a number of Type A transport packages to an air carrier. Each package consisted of a single patient dose of a medical isotope. The air carrier damaged one of the packages during handling. The damage was minor and did not impact the safety integrity of the package. Nordion returned the damaged package to the original consignor for safe and proper disposition. The air carrier has provided additional guidance on package handling to mitigate future damage.
IN-20240913-005*	Incorrect transport package used	It was identified that Nordion made a shipment of a non-Nordion model sealed sources in a Type B transport package that is only authorized to transport the Nordion C-188 sealed source type. There was no impact to safety as the sources shipped were similar to the allowed contents in form, fit, and function. The error arose from improperly completed documentation. Additional documentation verification has been implemented to prevent reoccurrence.

*\* There was no impact to health, safety, environment or security as a result of these events*
